ZombiU.GuardallGuardstationSoftwareepub Â· A: This is a new version of my answer. The string  
match() method has a new parameter. This parameter is the pattern to look for. The match() method  
also has a new boolean parameter which enables or disables case-insensitive matches. The string  
endsWith() method returns a boolean value indicating whether or not the specified String ends with  
the specified String. For example: String s = "AABABAAB"; boolean result = s.endsWith("B"); // false  
result = s.endsWith("b"); // true You can also get a substring by using the substring() method. String  
s = "AABABAAB"; String sub = s.substring(s.length()-3); Using the endsWith() method and the  
substring() method, you can shorten your method from this: if (s
