If you are familiar with another photo editing program, you may be able to figure out how to use Photoshop by looking at the tutorials available. You can find a lot of simple Photoshop training out there on YouTube. This chapter covers the ins and outs of working with layers and how to use them to apply your own creative touch to images. You can learn all about the different editing tools in Photoshop by perusing Chapter 5. Understanding the layer structure in Photoshop is important to using it for graphic design. Understanding the Layers Photoshop has a layer-based editing system that enables raster images to be created and altered. The editing system stores layers in a separate layer group for each type of edit that you make. Each edit is stored in the appropriate layer group. When an image is imported, Photoshop assigns an ID to it, so it can be associated with the appropriate layer group and layer. You can create a new layer group if you want your image to retain a consistent layer structure no matter what edit you make. All layer groups work in the same way, so the process of working with layers is similar for all groups. You also can assign a name to each layer in a group and work on layers in any order. This chapter covers the most common aspects of working with layers, including: Layers are designed to be grouped in different ways. You can group them by layer name, type of edit, sequence number, and more. Layers act like pages in a book. You can create a new page, add text or images to pages, arrange pages in sequence, and even add notes to pages. Layers are added to a layer group (or, sometimes, multiple groups). You can easily add layers and adjust their properties. Layers form the basis of all Photoshop editing. You can group layers by any criteria and you can also move and copy layers between layers. You can resize layers to make them bigger or smaller. You can flatten layers, and then return them to the group they were in. Layers are linked together so that edits made on the active layer affect the layers below. For instance, if you change the colors of the layers below the active layer in a group, the active layer changes as well. You can merge two layers, which makes the one on top change, and you can split them, which makes the bottom one change. Layers combine together to form pages in a

Relationship between lung function and bronchial hyperresponsiveness in asymptomatic allergic asthmatic children. Bronchial hyperresponsiveness (BHR) may play an etiological role in asthma. The hyperresponsiveness of the asthmatic airways can be demonstrated by a rapid decrease of the airway's maximal responses to bronchoconstrictor stimuli after treatment with a long acting inhaled beta2-agonist. We measured the maximal expiratory flow rates (PEF) and the maximal expiratory flow rates at 50% of forced vital capacity (MEF50) before and after inhaled betamethasone of 10 asthmatic children before and after a 2 week treatment with oral theophyllin. We also measured BHR by the standard provocation method with histamine in ten children with bronchial asthma and in eight normal controls. We found no significant difference before and after theophyllin treatment in the responses of the asthmatic children to the inhalation of betamethasone. The combination of maximal expiratory flow rates and BHR, measured before and after theophyllin treatment, allows discrimination between normal and asthmatic children. The normal and asthmatic children responded equally well to the inhalation of betamethasone and were considered to be non-responders to a possible acute effect of theophyllin. Unai Emery has been the subject of a spying investigation by Spanish prosecutors over claims he offered a player a €150,000 bonus to leave Sevilla, the club's president has revealed. "We had a phone call from his lawyers telling us he was under investigation and we wanted to know everything about it," said Raimundo Rubi, the president of Sevilla's parent company. "The FA has suspended Unai as we have suspended him, so we knew we didn't need to suspend him. "We needed to suspend Unai because of what we had heard from the press. We have a good relationship with our players, but it is true we spoke with Unai and it wasn't a personal call. "We had talked to Unai and he had told us there was nothing to it. It was a friendly call and he also confirmed that to us. He was a good coach, he is still our coach, and we need to talk to him. We want to know what we need to do, what has happened and what he's thinking." Rub
